

## Safe Disposal of Lith-Ex Aerosols

1. Before throwing your aerosol can into the waste bin, take the time to ensure that it is completely empty. Spraying the contents onto an absorbent material such as sawdust is advisable to prevent the creation of a slip hazard. The Lith Ex product is non hazardous and non toxic, and can be disposed of as general waste in accordance with local regulations.

If it is completely empty, your aerosol can go into the normal route for the recycling of metals.

2. Aerosol cans that are either partially or completely full need to be separated from your other recyclables and general waste as they are considered hazardous waste due to their stored pressure. Most authorities collect aerosols via household collection, otherwise, they can be taken to your local recycling facility and put into the correct recycling banks.
3. Do not modify the aerosol can in any way – e.g. do not pierce, crush or flatten the aerosol, as this may increase the risk of it exploding.
4. Do not heat, or pierce, the can unless completely empty of all gas and charge.
5. Remove any detachable or loose parts to the aerosol, such as a plastic parts, and dispose of these separately within the appropriate recycling facility.
